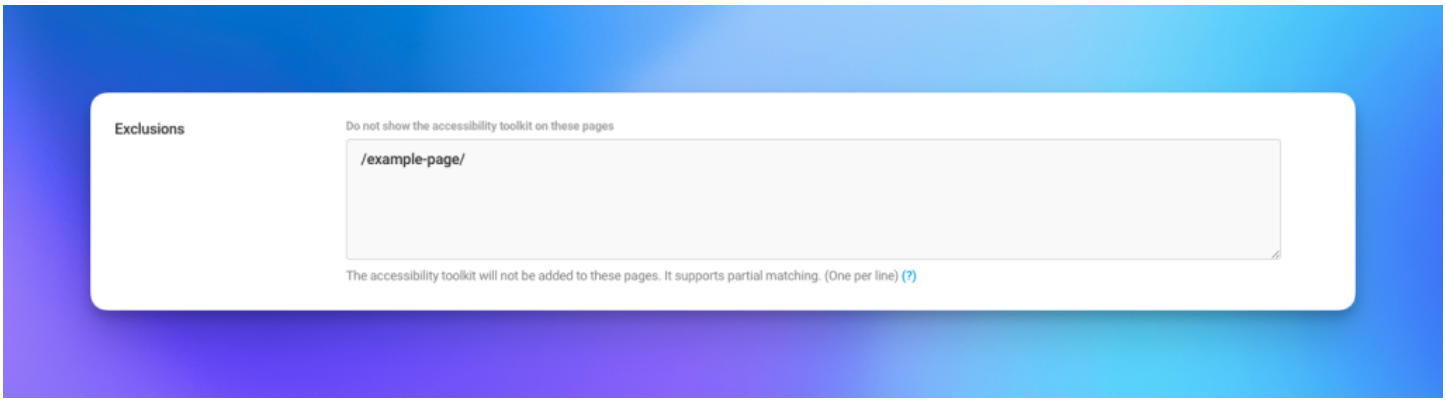
Do not show the accessibility toolkit on the specific page

WP Accessibility Toolkit · https://handyplugins.co/docs/accessibility-toolkit-excluded-pages/

You can exclude particular pages by adding URLs or paths to exclusions in the settings. To access these settings, go to the WordPress Dashboard, and locate the "Accessibility Toolkit" option under the Settings menu.



Programmatically control

To manage the behavior of the Accessibility Toolkit programmatically, you can use filters. For instance, to disable the accessibility widget for users who are logged in, apply the `accessibility_toolkit_show_frontend` filter. A code snippet demonstrating this usage is provided below.

```
add_filter( 'accessibility_toolkit_show_frontend', function ( $status ) {
	if ( is_user_logged_in() ) {
		return false;
	}

	return $status;
} );
```
