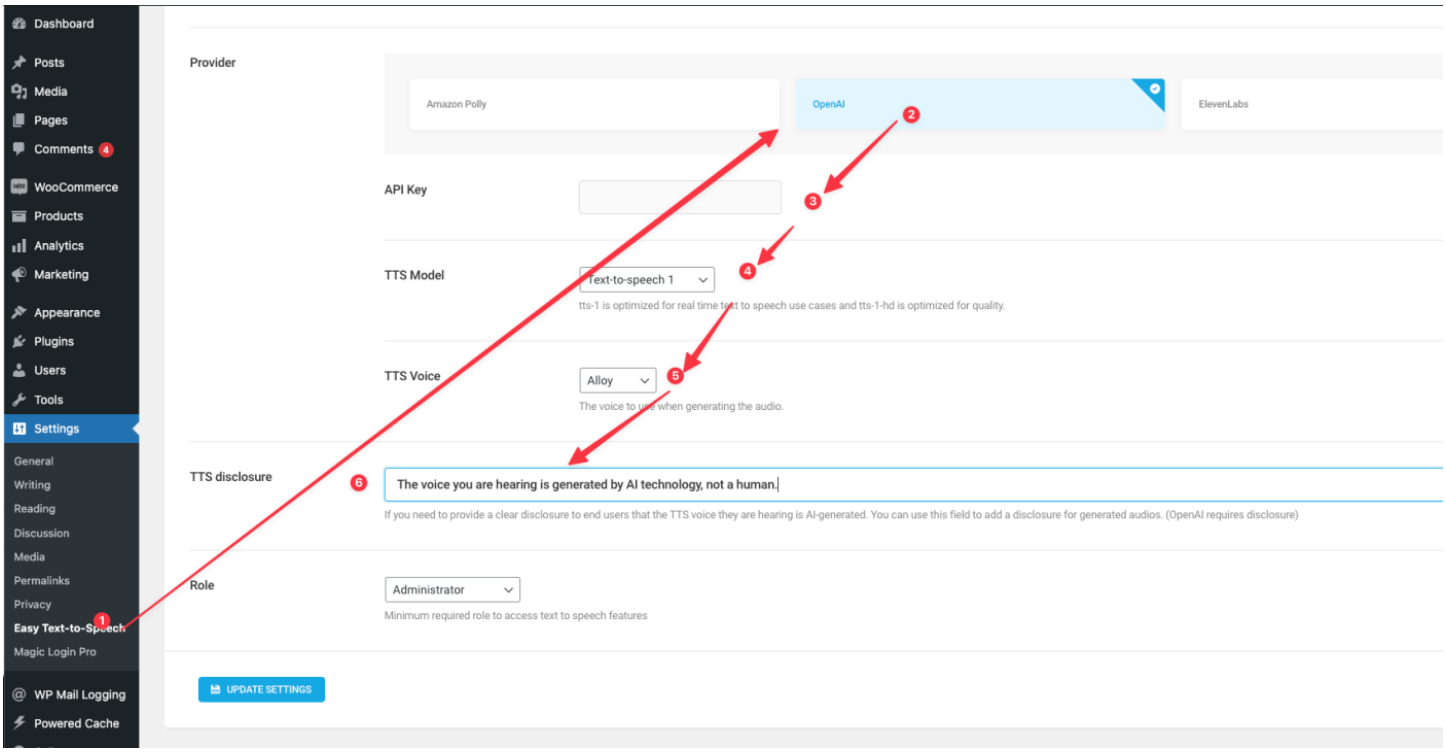
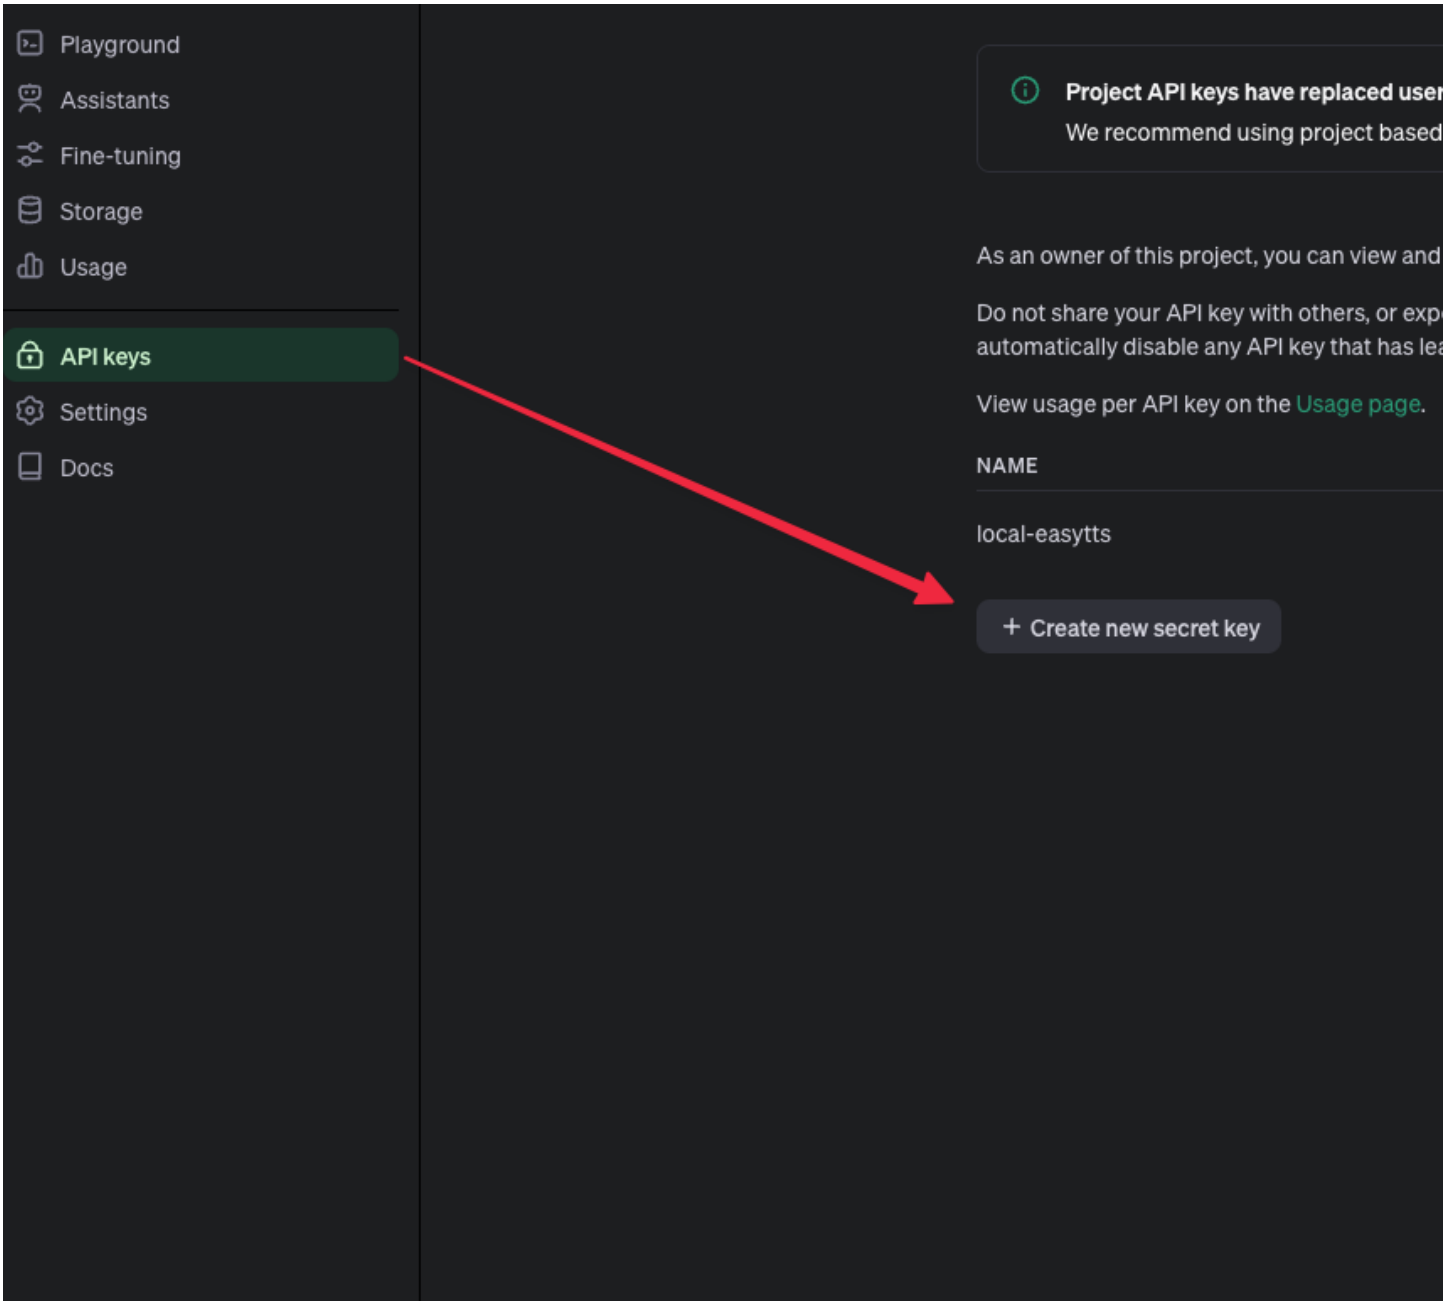
OpenAI Integration

Easy Text-to-Speech · https://handyplugins.co/docs/openai-tts-integration/

Once you installed and activated Easy Text-to-Speech plugin, visit the settings page.



And then choose OpenAI as the provider and enter your OpenAI API key. If you don't have an api key, you can create a new one at https://platform.openai.com/api-keys



Choose your TTS model, (TTS HD will give a better audio quality) and choose the default voice and that's all.

Please don't forget, OpenAI requires a clear disclosure to end users that the TTS voice they are hearing is AI-generated. So you can use TTS disclosure field for this purpose, it will automatically add disclosure text to the generated voices when adding them to the WordPress editor.
