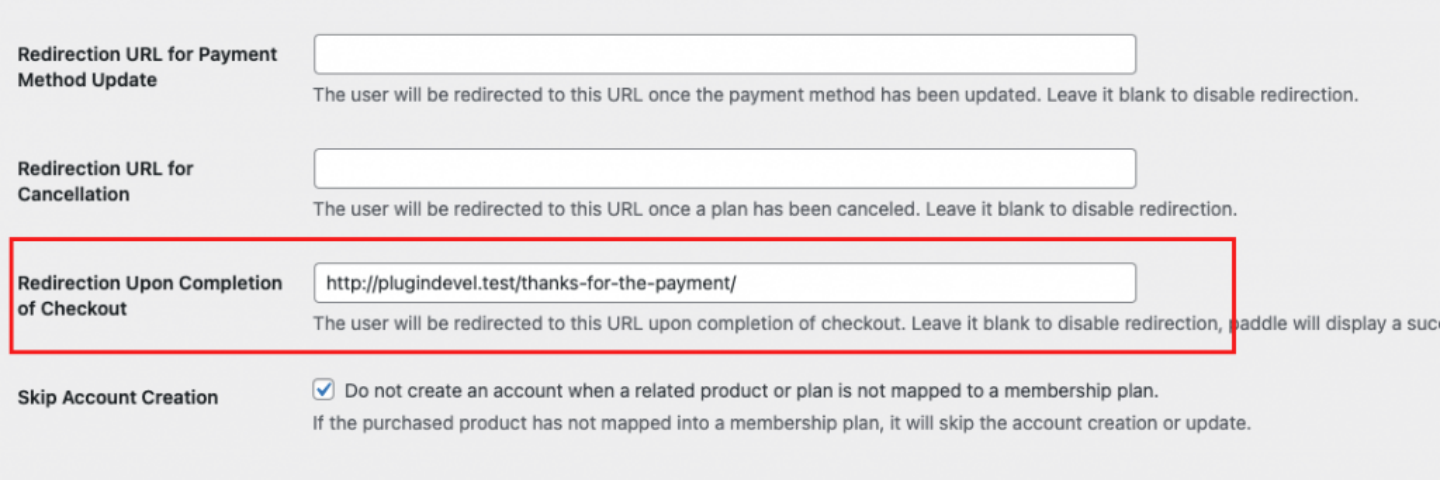
Custom Redirect After Successful Checkout

PaddlePress Pro · https://handyplugins.co/docs/custom-redirect-after-successful-checkout/

You can redirect customers right after successful payment. In order to do that;

1) Global Redirection

Set a target page from PaddlePress > Settings > Preferences. It will apply to checkout buttons that doesn't override the `data-success` parameter.



2) Shortcode Parameter

Pass `data-success` parameter to `[paddlepress...` shortcode. Eg: `data-success="https://example.org/thank-you-for-payment"`...

If you are using PaddlePress Billing, you need to use data-success-url instead data-success. E.g:

```
[paddlepress_billing price_id="pri_01j0zsxbpbn0safkn5krhc28g6hc" label="Buy Now!" data-success=”https://example.org/thank-you-for-payment”]
```
