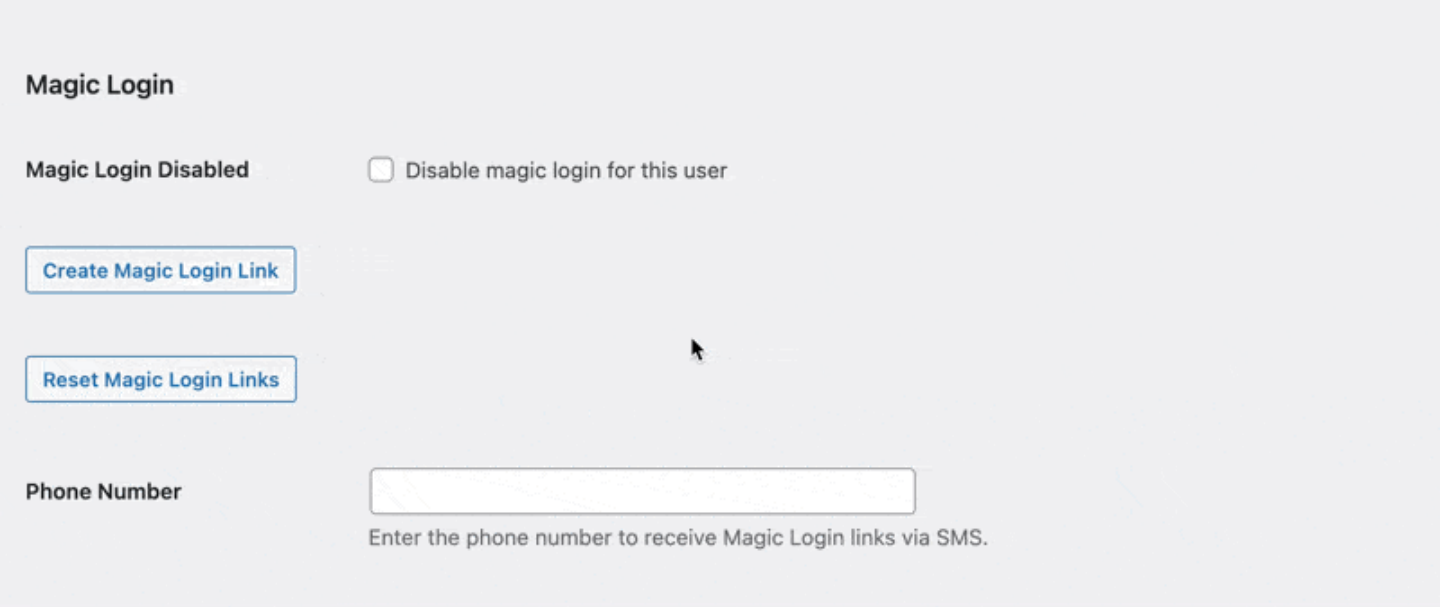
Reset Magic Login Links for a User

Magic Login Pro · https://handyplugins.co/docs/reset-magic-login-links-for-a-user/

As of version 2.5, Magic Login allows administrators to reset magic login links for a specific user.



This is useful if:

- A user reports that their email was compromised.
- You want to force-reset login links for security reasons.
- You are testing user accounts and need to clean up old tokens.

How to Use

1. Go to **Users > Edit User**.
2. Locate the **Magic Login** section.
3. Click the **Reset Magic Login Links** button.

All login links previously generated for the user will be immediately revoked. The user will need to request a new login link to sign in again.

> ℹ This action only affects the selected user and does not impact other users on the site.

Technical Notes

- Internally, this action removes all valid login tokens stored for the user.
- If the user has received a magic link via email or SMS, it will no longer work after this reset.
