Use magic login as the default login method?

Magic Login Pro · https://handyplugins.co/docs/magic-login-as-the-default-login-method/

By default, magic login doesn't force your default login page to create login links. In order to change default login behavior, you will need to force magic login and use it as the default login method.

In order to redirect default login requests to the magic login page, you need to enable the "Force Magic Login" option.

PS: Interm login request still would prompt default login box.
