Magic Login – FluentCRM Integration

Magic Login Pro · https://handyplugins.co/docs/magic-login-fluent-crm/

The **Magic Login - FluentCRM Integration** allows you to seamlessly integrate Magic Login with FluentCRM, enabling automatic user authentication and email-based login workflows within FluentCRM campaigns. This integration enhances user experience by reducing friction during logins while leveraging FluentCRM's automation features.

Hooks Overview

1. `magic_login_fluent_crm_before_create_login_link` (Action Hook)
   - Fires **before** creating the Magic Login link for a FluentCRM subscriber.
   - Allows developers to perform actions such as logging, modifying user data, or validating custom conditions before generating the login link.

2. `magic_login_fluent_crm_create_login_link` (Filter Hook)
    - Allows modification of the generated Magic Login link before it is returned.
    - Developers can use this to customize the login URL, add tracking parameters, or enforce security measures.

Usage Example: Adding a Tracking Parameter

```
add_filter( 'magic_login_fluent_crm_create_login_link', function( $login_link, $user, $email ) {
    return $login_link . '&utm_source=fluentcrm';
}, 10, 3 );
```

Usage Example: Setting a Dynamic `redirect_to` Parameter

```
add_filter( 'magic_login_fluent_crm_create_login_link', function( $login_link, $user, $email ) {
    $redirect_url = home_url(); // Default redirect to homepage

    if ( in_array( 'administrator', $user->roles ) ) {
        $redirect_url = admin_url(); // Redirect admins to the dashboard
    } elseif ( in_array( 'customer', $user->roles ) ) {
        $redirect_url = site_url( '/customer-dashboard/' ); // Redirect customers to their
dashboard
    } elseif ( get_user_meta( $user->ID, 'preferred_page', true ) ) {
        $redirect_url = get_user_meta( $user->ID, 'preferred_page', true ); // Custom redirect per
user
    }

    return add_query_arg( 'redirect_to', urlencode( $redirect_url ), $login_link );
}, 10, 3 );
```

or you can set $_POST['redirect_to'] in the action:

```

add_action( 'magic_login_fluent_crm_before_create_login_link', function () {
$_POST['redirect_to'] = 'https://example.com';
} );
```
