Automatic account creation

PaddlePress Pro · https://handyplugins.co/docs/paddlepress-pro-automatic-account-creation/

Once you completed the webhook setup, your website will listen to the subscription and one-off purchase events and create or update a user account.

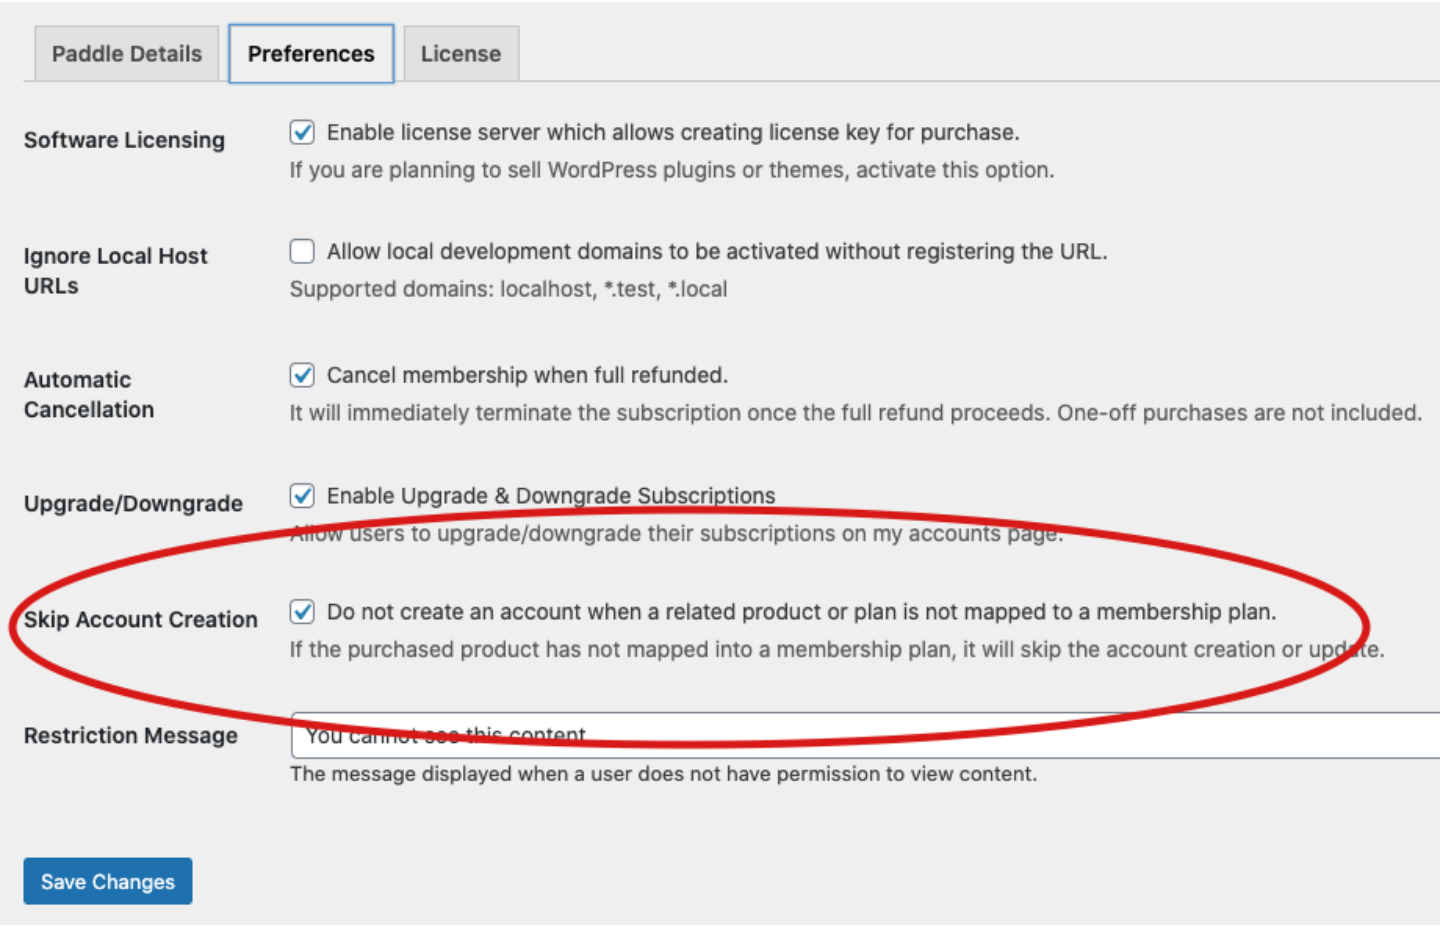

How does account creation works?

PaddlePress checks passthrough parameter and lookup the user. When you use the shortcode generated by PaddlePress passthrough parameter sends automatically on the checkout requests. This way we can identify the user in subsequent requests/alerts.

When the passthrough parameter is not acceptable, it checks the WP users by email and matches the user with a given email address. If there is no match, it just creates a new WordPress user and saves the payment details.

Skip Account Creation

If you don't want PaddlePress to create a new account for the products or plans that not mapped into a membership plan, you can simply do that by enabling the "Skip Account Creation" option under Preferences. This option might be useful if you have a different fulfillment method for particular products or plans in your Paddle account.

Paddle Details
Preferences
License
Software Licensing
Enable license server which allows creating license key for purchase.
If you are planning to sell WordPress plugins or themes, activate this option.
Ignore Local Host URLs
Allow local development domains to be activated without registering the URL.
Supported domains: localhost, *.test, *.local
Automatic Cancellation
Cancel membership when full refunded.
It will immediately terminate the subscription once the full refund proceeds. One-off purchases are not included.
Upgrade/Downgrade
Enable Upgrade & Downgrade Subscriptions
Allow users to upgrade/downgrade their subscriptions on my accounts page.
Skip Account Creation
Do not create an account when a related product or plan is not mapped to a membership plan.
If the purchased product has not mapped into a membership plan, it will skip the account creation or update.
