Two-Factor Authentication (2FA) Compatibility Guide

Magic Login Pro · https://handyplugins.co/docs/two-factor-authentication-2fa-compatibility-guide/

Magic Login works alongside popular WordPress 2FA plugins, allowing you to combine **passwordless login** with an extra layer of security.

Supported Plugins

Magic Login is compatible with:

- Two-Factor (recommended)
- WP 2FA

How It Works

Magic Login handles the **passwordless login link**.

The 2FA plugin adds a **verification step after login** (e.g. authenticator app or email code). (Depending on the plugin and configuration, users may be asked to complete 2FA immediately after clicking the magic link.)

Recommended Option

- **Two-Factor** → lightweight, per-user setup (WordPress-native)
- **WP 2FA** → more advanced features (policies, setup wizard, enforcement)

Setup (Quick Steps)

1. Install and configure **Magic Login**
2. Install either **Two-Factor** or **WP 2FA**
3. Enable a 2FA method (Authenticator App or Email)
4. Test login flow:
    - Request magic link
    - Open link
    - Complete 2FA step

Best Practices

- Enable **backup codes** to avoid lockouts
- Test with a non-admin account first
- Ensure **email delivery works reliably**
- Start with admins before rolling out to all users
